

ADVANCING PHOTOGRAPHY THROUGH TECHNOLOGY

Since its founding, DxO has asserted itself as one of the most innovative French companies in the photography and photo-editing industry. It designs and sells advanced photo editing software for amateur and expert photographers. Its solutions, which are grounded in its extensive knowledge of optical science, offer highly effective correction and processing tools. DxO's goal is to harness its expertise to make sure the industry's best technologies are available to every photographer.

EXTENSIVE EXPERTISE

DxO's expertise is the result of a close-knit relationship between its engineers and the world's top applied mathematics research laboratories. Today, the company has a number of innovations to its name, including the automatic correction of optical defects produced by digital cameras based on a prior analysis of cameras and lenses in DxO's laboratories. DxO has also developed the market's most effective denoising and RAW development tools and its most powerful optical correction algorithms.

THE MOST EFFECTIVE IMAGE PROCESSING SOLUTIONS AVAILABLE

DxO PHOTOLAB

DxO PhotoLab is an advanced RAW- and JPEG-photo editing software that features powerful automatic optical correction tools and exclusive image processing functions. These include DxO PRIME, the last word in denoising technology; DxO Smart Lighting exposure optimization; and ClearView Plus haze reduction.

NIK COLLECTION BY DxO

Nik Collection By DxO is a suite of eight photography plugins for Adobe Photoshop, Lightroom Classic, Elements, and Affinity Photo. It offers a range of 200 exclusive presets and creative effects as well as a number of retouching tools. It also features U POINT™ technology, an exclusive local adjustment tool.

DxO FILMPACK

DxO FilmPack is an analog film simulator. Using a unique process based on laboratory film analyses, it faithfully creates the color, contrast, saturation, and grain of over 80 iconic analog films. It also offers a wide range of creative effects.

DxO VIEWPOINT

An essential tool for photographers who use wide-angle lenses, DxO ViewPoint automatically corrects perspectives and restores the natural shapes of subjects located on the edge of the frame. It uses DxO optical modules to offer the exact type of correction needed. It also can be used to simulate shallow depth-of-field effects in a single click.
